DETAILED ACTION

Claim Objections

1. Claim 1 objected to because of the following informalities:

For clarity, a comma should be inserted in line 6 to read: --less than 10 µm, and a light reflectance--.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dehoff et al. (US Patent No. 5,452,219) in view of Ginneken et al. (Applied Optics).

Dehoff et al. disclose a method of making a tooth mold, the method including the step of laser scanning a model tooth (Abstract). The model may be made of materials such as waxes, ceramics, glass, porcelain, plastics, and metals (Col. 7, Lines 8-10), each of which are non-transparent or semi-transparent. Dehoff et al. disclose that the outer coating of the model can be varied to produce a myriad of optical and mechanical properties (Col. 7, Lines 41-45). The accuracy of the laser scan readings is dependent on the tooth model being reflective (Col. 5, Lines 65-68). Dehoff et

al. disclose that the color of the tooth can be varied and can be made to produce a color capable of

producing a natural appearance (Col. 7, Lines 24-45).

However, Dehoff et al. do not specifically disclose the roughness of the surface.

Ginneken et al. disclose that in modeling, one factor of reflectance is based on the roughness

of the surface (Page 130, Introduction).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to optimize the roughness to a value between 0.1µm and 10µm and to have a reflectance of 70% or higher, thereby providing a model that is easily and accurately scanned. As disclosed by Dehoff et al. and Ginneken et al., the accuracy of a laser depends on both the roughness and reflectance of the model being scanned. Where a parameter is recognized to be a result-effective

variable, it is prima facie obvious for one of ordinary skill in the art to determine an optimum value

for that parameter through routine experimentation. See MPEP 2144.05(II).

It would have been obvious to have a color difference ΔE^* ab of 15 or less, thereby producing a color shade representative of a real tooth.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Durbin et al. (USPN 6,592,371) disclose a method for imaging a three dimensional structure using lasers. Dehoff et al. (USPN 5,691,905) disclose prosthetic teeth and teeth molding materials.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Victor Cheung whose telephone number is (571) 270-1349. The examiner can normally be reached on Mon-Fri, 9-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pezzuto can be reached on (571) 272-6996. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
